Steve,

Operations for today went as follows,

Clean Harbors.

- Commenced the breakup of deep ice in locations where oil sheen is visible.
- Continued the removal of soiled grass along the bank, main focus areas are where grass is extremely soiled.
- Continued suction of emulsified oil at designated collection points, Utilizing Clean Harbors vacuum truck.
- Discussed with Cory B their plans for the next couple of days. Plans are to remove as much soiled grass and try to flush down what is left to a collection point. As the water level rises, we'll try and collect what ever sheen is left over.
- The lower temperatures last night froze over some areas where the grass is soiled and as a result the water level dropped.

Attached are some pictures from today, we also walked the creek and identified other locations for grass removal.

furthermore, we touched base with Stantec's SCAT members, for any SCAT assistance they might need. later this week they will conduct SCAT operations at the A.C.E sites.

Any questions let me know.

Respectfully,

PO2 Eduardo Alcantara
